DEVELOPMENT BEFORE PRODUCTION

Reliable bulk production begins with careful development. Abed Textile's technical teams work across colour, chemistry, fabric preparation, printing parameters and process conditions to convert development requirements into repeatable production.

R&D FLOW

Customer Requirement → Fabric Review → Colour / Design Development → Trial → Evaluation → Optimization → Approval → Bulk Production

QUALITY ASSURANCE

Quality is managed throughout the process rather than inspected only at the end. Laboratory standards, production parameters and in-line controls should connect directly with customer requirements.

Incoming Material → Fabric Inspection → Lab Development → Process Control → In-Line Inspection → Shade / Print Evaluation → Testing → Final Inspection → Release

KEY TESTING AREAS

· CONFIRM CURRENT FACILITIES

Colour fastness	Rubbing fastness	Washing fastness
GSM	Dimensional stability	Fabric width
pH	Strength	Shade assessment
