EVERY RESOURCE COUNTS

Responsible manufacturing begins with understanding what enters the factory, how it is used and where improvement is possible. The final profile should prioritize verified operational data over general sustainability claims.

CHEMICALS & DYES

Supplier approval → Review → Purchase → SDS & documentation → Safe storage → Controlled use → Inventory monitoring → Waste management.

Approved inventory: [CONFIRM] · MRSL system: [CONFIRM]

WATER

Measure → Reduce → Reuse → Treat → Improve.

Water consumption: [CONFIRM] · Water reuse: [CONFIRM]% · ETP capacity: [CONFIRM] m³/day

ENERGY

Efficient equipment · Utility monitoring · Boiler / thermal performance · Compressed air · Heat recovery · Renewable opportunities.

Energy: [CONFIRM] · Renewable capacity: [CONFIRM]

WASTE

Prevent where possible. Recover where practical. Dispose responsibly when necessary.

Waste recycled / recovered: [CONFIRM]%

WATER · ETP

ENERGY · UTILITIES

Resource efficiency supports both environmental performance and manufacturing competitiveness.
